1. Introduction

1.1 Purpose

Cool Cyber Games is an interactive platform designed to teach cybersecurity concepts through gamification. The platform provides hands-on experience, real-world cybersecurity challenges, progress tracking, making cybersecurity education engaging and accessible.

1.2 Document Conventions

This document follows the IEEE 830-1998 Standard for Software Requirements Specifications.

1.3 Intended Audience and Reading Suggestions

This document is intended for:

- Development Team
- Faculty Advisor
- Stakeholders interested in cybersecurity education

1.4 Project Scope

The system will offer:

- Interactive tutorials and quizzes
- Fun games and simplified cybersecurity concepts
- Hands-on activities and real-world cybersecurity challenges and simulations
- Comprehensive tutorials and practical applications
- Progress tracking, certification system, and overall leaderboard
- Accessibility from all OS systems and mobile devices
- Backend integration with a database to store points, track progress, and manage user data
- Secure and fast login system
- Authorization system to maintain a secure server

2. Overall Description

2.1 Product Perspective

Cool Cyber Games is a standalone web-based application that integrates front-end, back-end, database, authentication, and gamification technologies. It is designed for cross-platform compatibility and accessibility.

2.2 Product Functions

- Interactive Tutorials & Quizzes
- Gamified Learning Modules
- Real-world Cybersecurity Challenges
- Progress Tracking & Certification
- Web-based Interface
- User Accounts using Google OAuth 2.0

2.3 User Characteristics

- Beginners of all ages
- Content is catered to adults (18-35)
- No prior cybersecurity knowledge required
- Users seeking hands-on cybersecurity training

2.4 Constraints

- Realistic and engaging cybersecurity scenarios
- Secure authentication system
- Compliance with accessibility standards
- Must be playable on both desktop and mobile web browsers

3. Specific Requirements

3.1 Functional Requirements

3.1.1 User Authentication

- The system shall support OAuth integration for Google authentication.

3.1.2 Interactive Tutorials and Quizzes

- The system shall provide step-by-step guidance on cybersecurity concepts in the tutorials.
- The system shall include multiple-choice, drag-and-drop, and scenario-based questions in quizzes.

3.1.3 Gamified Learning Modules

- The system shall present cybersecurity challenges in a game-like format.
- The system shall mirror real-world cybersecurity threats in the simulations.
- The system shall include levels and increasing difficulty progression.
- The system shall provide hints and guidance for difficult levels.

3.1.4 Progress Tracking and Certifications

- The system shall track user progress and provide certificates upon course completion.
- The system shall maintain a leaderboard to encourage user engagement.

3.1.5 User Dashboard

- The system shall have a dashboard page for the user to view

3.2 Non-functional Requirements

3.2.1 Performance Requirements

- The system shall support at least 100 concurrent users.
- The system shall ensure load times do not exceed 2 seconds per page.
- The system shall minimize memory and processing overhead for smooth gameplay.
- The system shall not exceed 100GB of bandwidth monthly due to free-tier restrictions on Render.

3.2.2 Security Requirements

- The system shall implement HTTPS for secure communication.
- The system shall follow OWASP security guidelines.

3.2.3 Usability Requirements

- The system shall be user-friendly and accessible to non-technical users.
- The system shall comply with ADA accessibility standards.
- The system shall provide an intuitive UI/UX for a smooth gameplay and learning experience.

3.2.4 Scalability Requirements

- The system shall support additional features in the future.
- The system shall allow for modular expansion of game content.
- The system shall have options to increase server bandwidth.
- The system shall have options to increase database storage capacity.

4. Interface Requirements

4.1 User Interfaces

- The system shall ensure the interface is intuitive and visually appealing.
- The system shall provide dark and light mode options for user comfort.
- The system shall provide ADA features such as color-blind assist.

4.2 Software Interfaces

- The system shall implement the front-end using HTML, CSS, JavaScript.
- The system shall integrate a back-end using Node.js, Render, and Express.js.
- The system shall use two MongoDB databases for User/Game storage.
- The system shall use Godot for game development.

4.3 Hardware Interfaces

- The system shall be compatible with standard desktop and mobile browsers.

5. Other Requirements

5.1 Database Requirements

- The system shall use a MongoDB game database to store user progress, scores, and achievements.
- The system shall use a MongoDB user database to store public facing non-sensitive user information such as email, name, and avatar for their account.

5.2 Compliance Requirements

- The system shall comply with the ADA.
- The system shall follow industry standards for cybersecurity education platforms.

5.3 Assumptions and Dependencies

- The system shall assume users have an internet connection.
- The system shall assume users have or can create a Google account.
- The system shall assume third-party libraries remain actively maintained.

6. Appendix

This document is subject to change as development progresses. Future iterations will include additional details on implementation, testing, and deployment strategies.
